

SDK-Dial-A-Pest

SDK-DialAPest Strikes Gold Launches New Goldmine CRM System

With a total emphasis on customer service excellence, leading pest control specialist, SDK-DialAPest, has now introduced a Customer Relationship Management (CRM) system at its head office in Paignton.

SDK-DialAPest is one of the UK's leading domestic pest control providers and has a long, established reputation for delivering excellent customer service and the introduction of the new CRM will strengthen this by improving communication with customers pre and post treatment. As SDK-DialAPest provides professional services to over 20 councils throughout Southern England and allocates appointments in 'real-time', it is essential to work to the highest standards to ensure that the booking of treatments for the public is quick and efficient, backed up by necessary and useful documentation.

With such high standards required, SDK-DialAPest undertook an extensive search to find the right CRM system to fit its exacting requirements. It has taken months to engineer the software and processes to meet the standards required but it has now been launched with great success and is yet another another step on the path to maintaining SDK-DialAPest's core objective – Customer Service Excellence.
